
Master Project Software Engineering: Team-based Development WS 2012/13

Informative Meeting, July 19th, 2012

Anne Groß

anne.gross@informatik.uni-kl.de

Tel.: 0631 6800 2104

Agenda

- Learning Objectives
- Previous Projects
 - Results
 - Organization of projects
- Dates & Workload
- Next Steps
- Discussion

Capstone Projects Learning Objectives

- 
- A photograph of a person wearing a blue and white plaid shirt, sitting at a desk in a computer lab. The person's hands are on a black laptop keyboard. In the background, there are other desks with computer monitors and mice. The scene is brightly lit, suggesting an indoor office or classroom environment.
- **“Team-based Software Engineering”**
 - Experience software engineering in a realistic project setting
 - Real customer providing real world application scenario

- **Software Engineering**

- Understand & practice learned SE practices
- Understand typical problems

- **Team**

- Working together with people from different backgrounds
- Establishment of a network of people working in the SE

▪ Customer

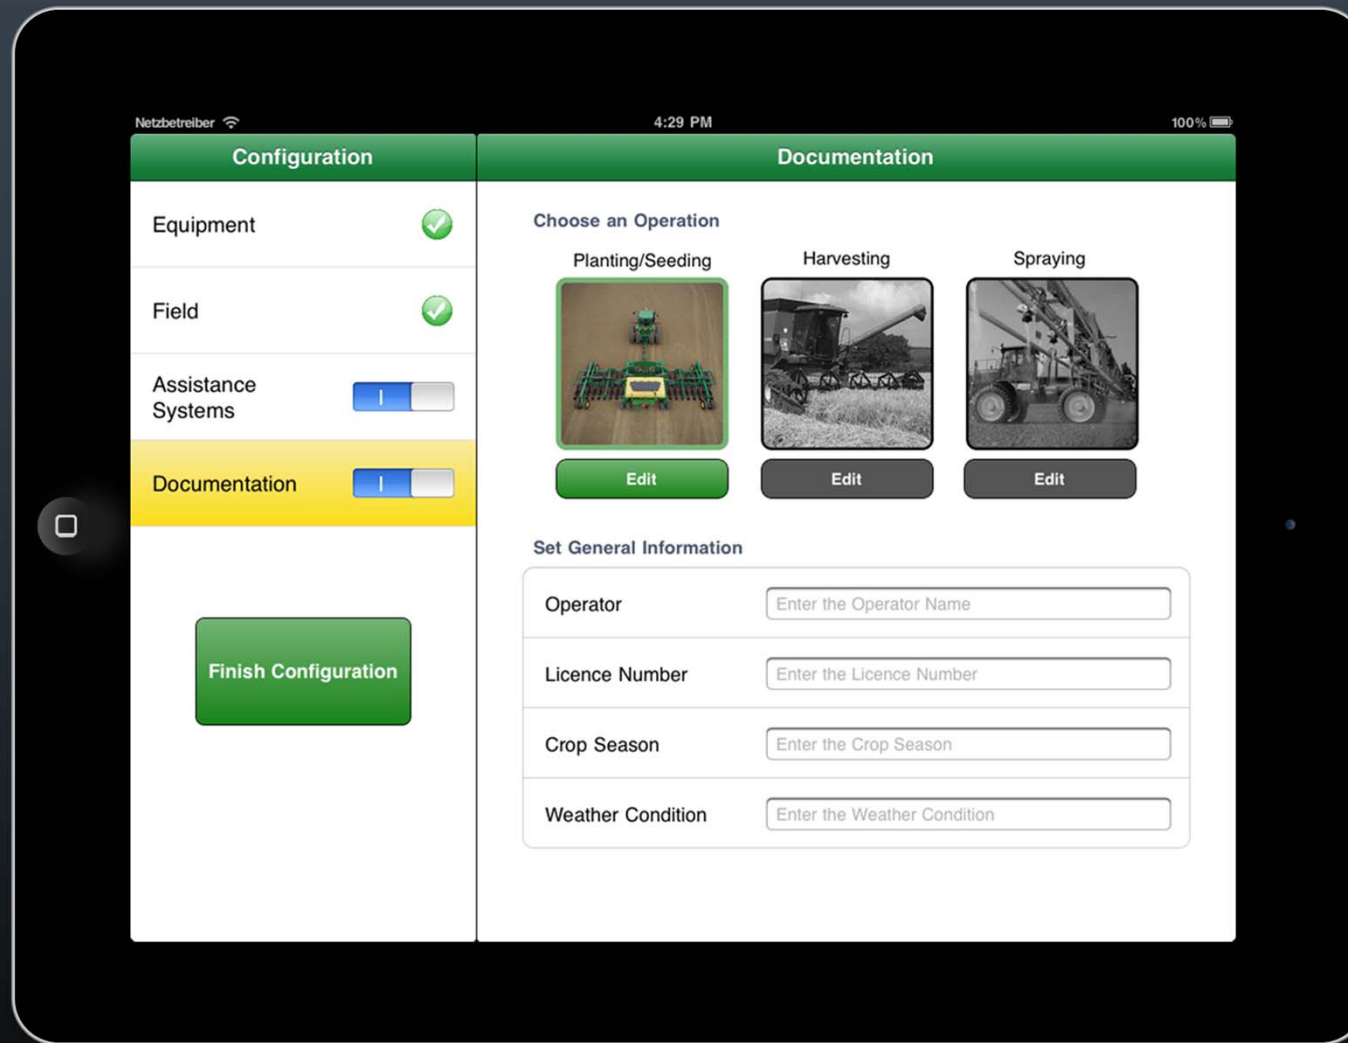

- Understand & experience customer interactions
- Satisfaction & positive feedback from customer's side
- Deliver something interesting to the customer, given the lack of experience
- Having the project to serve as a starting point for discussions and future work

Capstone Projects Customer "Deere & Company"

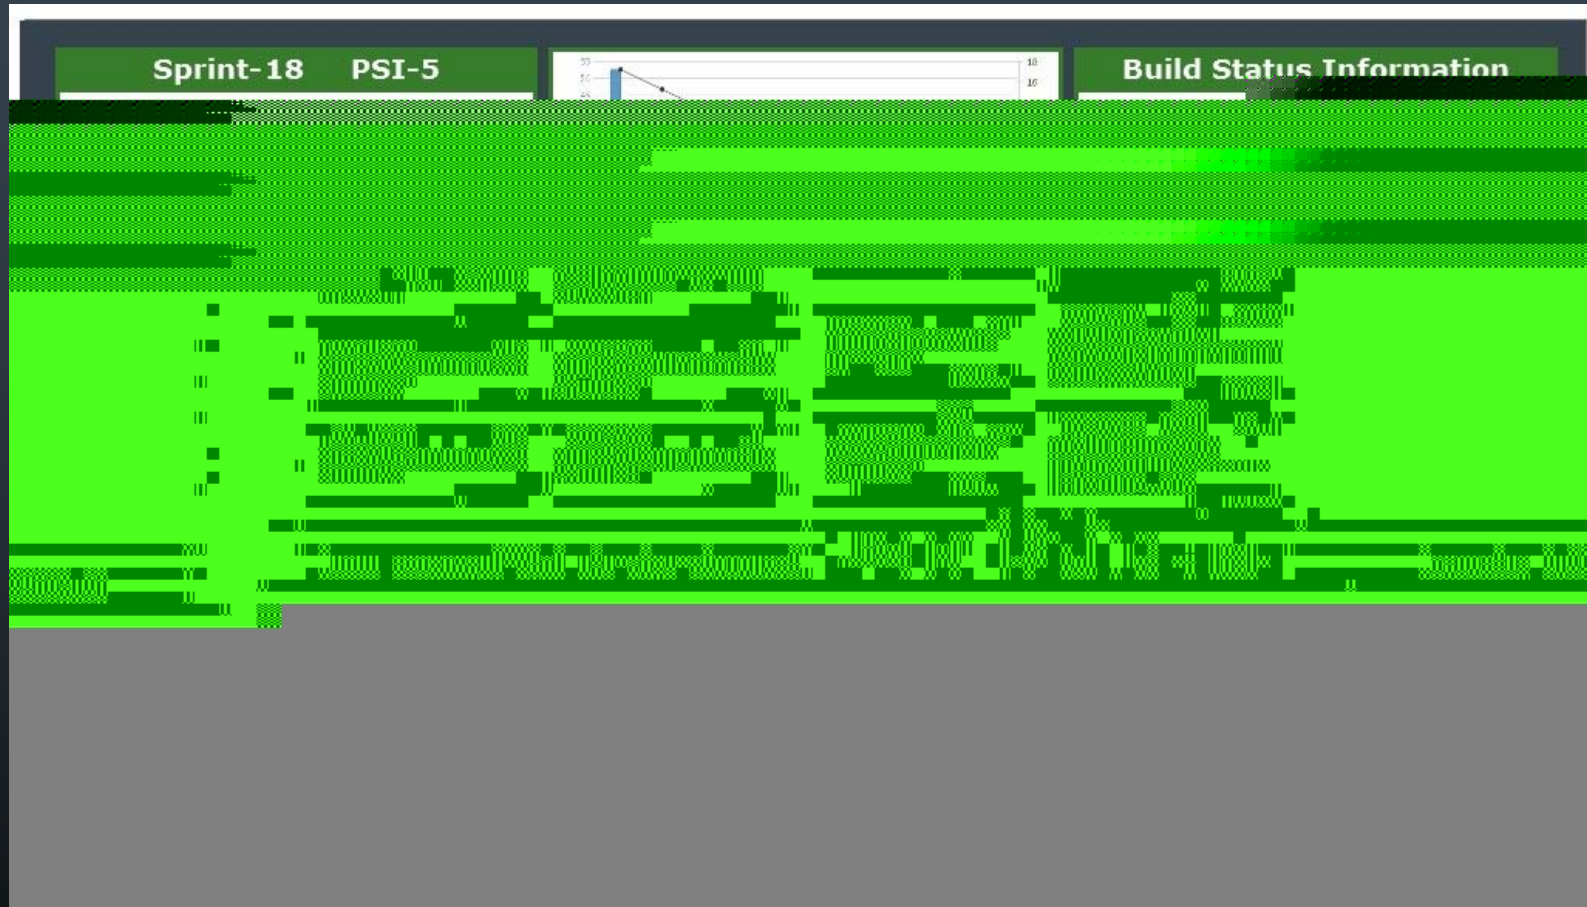

- John Deere European Technology Innovation Center (JD ETIC), Kaiserslautern
- Moline Headquarter, USA

Results Master SE 2010/11 "Mobile Configuration Assistant"

Results Master SE 2011/12 "Sprint Dashboard"

Organization Project Plan 2011/12

Organization Roles 2011/12

2 Project Manager

Plan & track activities, effort estimation & tracking, risk management, requirements elicitation, ...

2 Requirements Engineers

Requirements elicitation, requirements specification, change management, ...

3 UI Designer

Requirements elicitation, interaction design, prototyping, evaluation, support development ...

2 Architects

Requirements elicitation, architecture design and specification, change management, quality assurance ...

1 Architect / Developer

architecture design, communication with developer, ...

4 Developer

Component Engineering, Implementation, ...

1 Tester / Developer

Test preparation, running tests, communication, quality assurance, ...

2 Tester

Test preparation, test documentation running tests, quality assurance, ...

Organization Supervisors

Anne Groß

Project Coordination
(Project Management)
Requirements Engineering

Gleb Kutepov

Project Management
Architecture
Implementation

Sebastian Weber

UI / Interaction Design
Implementation

Alexander Klaus

Testing

Frank Elbertzhager

Inspection

Organization Dates & Workload

- Kick-Off in September (~14th – 19th / EMSE)
- October 1st – December 14th
- Work in Lab@ Fraunhofer IESE
- Regular Meetings / Presentations
- Final Presentation
- Workload ~240 hours
(consider this when planning your classes!)
- 2 weeks full-time then part-time
(you have to work until the end)

Organization Next Steps

- Tutorials available on webpage <http://www.wage.informatik.uni-kl.de/teaching/p-team/ws2012/>
- Collection of data for contract
- Discuss goals and project plan with customer (Anne)
- News will be communicated via Email and on webpage
- Next Meeting: Kick-Off
